

A guide to efficient electric heating and cooling

By partnering with Solar Savers, we're making it easier for Manningham households to switch to efficient heating and cooling systems.

See what support is available and how it all works.

Why install energy-efficient heating and cooling?

Heating and cooling represents 40 per cent of the average household energy bill, with heating being our biggest energy use in Victoria. With modern technologies, there are opportunities to replace traditional heating systems with energy-efficient electric options.

Electric reverse cycle air conditioners can provide both heating and cooling for your home. These highly efficient systems can keep you comfortable with lower energy bills. If you have solar, the costs could be even lower.

How we can help?

We provide:

- **Information and tools:** Our resources will help you plan your switch. Visit manningham/vic.gov/electrify-your-life for details.
- **Events and information:** We hold regular information sessions so you can learn more.
- **Free advice and quotes through Solar Savers:** We've partnered with Solar Savers, a local government initiative. Through Solar Savers you can access advice, a quote, eligibility for discounts, and support to install a reverse cycle air conditioner.

What discounts are available?

Manningham residents may be eligible for:

State Government rebates and incentives*

- For a wall mounted reverse cycle air conditioner, residents can access State discounts averaging between \$100 to \$1400.**
- For multiple wall mounted split systems or a ducted reverse cycle air conditioner, residents can access State discounts averaging between \$200 to \$5,000.

* Eligibility requirements apply. These are indicative ranges and depend on the specifics of your appliance/s.

** Based on current data from energy.vic.gov.au/victorian-energy-upgrades/products/heating-and-cooling-discounts
